History of Silver Usage

Silver has a long history of being used by the ancients for numerous situations. It has an amazing ability to kill virus, bacterial and fungal organisms, and has been used for over 2,000 years to prevent sickness and heal diseases.

The ancient Romans, Greeks and others use silver containers to preserve food and water.

In Ancient China, people used a silver needle to test whether the food is poisonous. If it was, the silver needle would immediately turn black. The Chinese emperors used silver chopsticks.

And people wore silver jewelry to keep health. The silver jewelry would become brighter and brighter if a person was healthy. If the body had lots of toxins, the silver will turn grey.

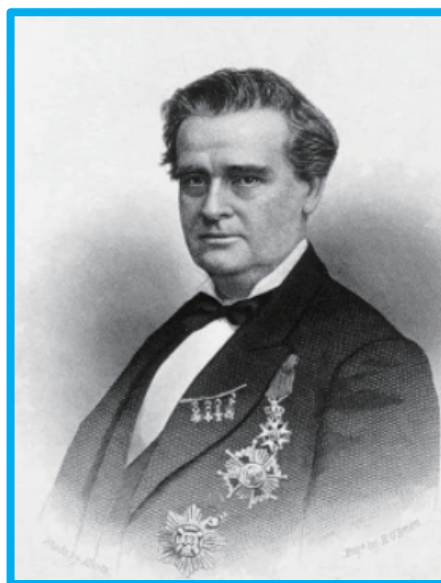

In North America, before refrigeration was not developed, people would drop silver coins into the vessel to keep the milk fresh for longer. By 1800, people produced silver vessels to store water, wine, milk and Silver.

In 1852, Dr J. Marion Sims made a seminal contribution to the medical use of silver. He used silver wires to repair the fistulas of a slave woman successfully.

In 1880s, Dr Carl Siegnund Franz Crede dropped silver nitrate into new-born babies' eyes to prevent ophthalmia neonatorum, which promoted the use of silver in medical field. The incidence of eye infection is reduced from 7.8% to 0.13% in decade. So this method was widely used through the world until antibiotics is developed.

Colloidal silver was being used for wound by B.C.Crede in 1891.

In the modern society, scientists and doctors began to researching colloidal silver because of its superior antibiotic function.

An independent test by Larry C. Ford, the MD of the Department of Obstetrics and Gynecology from UCLA School of Medicine, concluded that colloidal silver kills more than 650 bacteria, fungi, parasites, molds and fungi, all of which have the potential to cause diseases.

Nowadays tens of thousands of people around the world consume colloidal silver to prevent health problems.

What is Colloidal Silver?

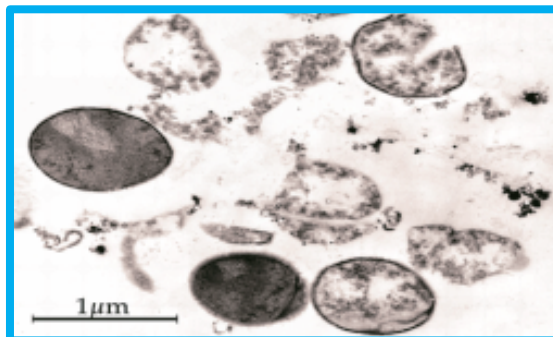

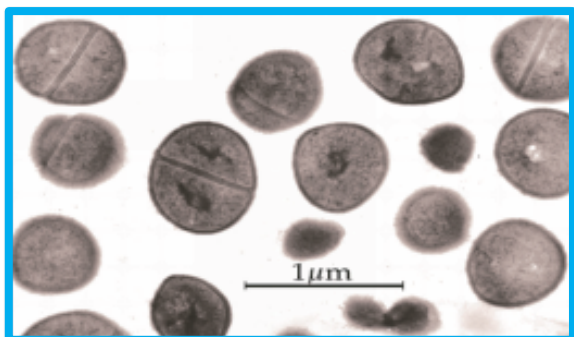

Colloidal Silver is small silver particles suspended in a liquid. These particles are stable and suitable for both external (skin) and internal use. It is the most desirable form of silver solution.

Working Theory of Colloidal Silver

The active oxygen made by silver destroys membranes of bacteria. Silver interferes with the metabolisms of bacteria. And it causes mutation of bacteria by combining with particular parts of proteins in the bacteria.

The presence of colloidal silver near an invader disables its oxygen- metabolism enzyme, its chemical lung, so to say. Within a few minutes, the invader suffocates and dies, and is cleared out of our bodies by the immune, lymphatic and elimination systems. Unlike pharmaceutical antibiotics, which destroy beneficial enzymes, colloidal silver leaves these tissue-cell enzymes intact, as they are radically different than those enzymes of primitive single-celled life. Thus, colloidal silver is absolutely safe for humans, reptiles, plants and all multi-celled living matter.

Uses of Colloidal Silver

Colloidal silver is known as antibiotic, anti-virus and anti-fungal so that it can prevent and treat numerous diseases in both humans and animals. For example, it works great to help

avoid or reduce symptoms of colds and flu. The body has an innate ability to rejuvenate and restore itself to optimum health. When taken daily, colloidal silver acts as an optimal immune system supporter by helping the body fight invaders. Medical tests indicate no known adverse effects from the use of properly prepared colloidal silver, and there has never been a recorded case of drug interaction with any other medication. The body does not develop a tolerance to Colloidal Silver and no allergic reaction has ever been recorded.

There are a number of uses of colloidal silver:

Skin Infection/Wound Care

Put it on cuts, scrapes, sores, rashes, burns, insect bites, acne, eczema, psoriasis, warts, itchy scalp and dandruff. Spray directly on area 5 to 10 times and repeat five times a day.

Eye/Ear Infection

Apply colloidal silver on pink eye, conjunctivitis, sty, ear infection. For eye infection, use two drops in the eye, three to four times a day. For ear infection, use 10 drops in the ear, leave for two minutes, then tip it out and repeat three to four times a day.

Sinus Infection

Apply one to two drops to each nostril, repeat three to four times a day. Or put one teaspoon in a nebulizer and inhale for 10 minutes; repeat three times per day.

Tooth/Gum Infection

Swish it in the mouth for tooth decay, toothache and bleeding gums; hold on the area inside mouth for a couple of minutes; repeat three to four times a day. Soak your toothbrush.

Throat Ailments

Apply colloidal silver to wipe out common throat ailments such strep. Gargle one to two tablespoons for two minutes, then swallow and repeat five times a day.

Fungus/Mold

Colloidal Silver has the ability to kill various fungi and mold. Spray on athlete's foot and nail fungi several times a day and repeat for days.

Vaginal Infections

Colloidal silver applied to the vaginal can combat yeast infections. Mix one part silver and two parts distilled water; hold inside for a couple minutes and repeat two times a day.

Colds and Flu

Colloidal silver's anti-viral can help combat Colds and Flu. Hold one to two teaspoons in the mouth for 30 seconds, then swallow and repeat every hour or two.

Pneumonia/Respiratory Infections

Put one teaspoon in a nebulizer and inhale for 10 to 15 minutes; repeat three times per day.

Diarrhea/Food Poisoning/Cholera/Urinary Tract Infections

Colloidal silver can penetrate the large intestine and treat traveler's diarrhea and cholera. Swallow one teaspoon three to seven times per day. For UTIs, you can also spray colloidal silver on the urinary tract two times a day.

Food Preservation/Water Purification

Spray/Soak meats and fresh foods for E-Coli and Salmonella. Preserve Ketchup, mustard, relish, and other condiments for a prolonged life. To purify water, apply one to two table-spoons per gallon of water.

Pet Health

Spray on pet's infected skin for cuts, rashes and ringworm. Keep pets fungi-free. Add drinking water for Horses, Cows, Goats, Sheep, Pigs, Chickens, etc. to de-worm naturally, eliminate the veterinarian.

Using Tips

1. Spray on everything in the kitchen/bathroom area.
2. Decontaminate door knobs and other surfaces.
3. Add a couple of ounces to laundry... kill mold and fungus.
4. Replace chlorine in your pool or hot tub.
5. Add a small amount to your fish tank or fish pond.
6. Burn Units, MASH Units, Hospitals, Ambulances, Pediatrics, the Military.

7. Silver Socks, Silver Underwear, Silver Yoga Mats, Silver Condoms, Silver Water Filters, Silver Band-Aids, and pretty soon...'Silver Everything'.
8. Spray shoes for odor and fungi control.
9. Spray dog beds for odor and flea control.
10. Spray dogs teeth and mouth for dental care.
11. Spray plants for insect control.
12. Spray body for a refreshing after bath.
13. Spray on an itchy scalp for relief.
14. Replace Lysol with colloidal silver to disinfect the home.

4 Ways of Applying Colloidal Silver

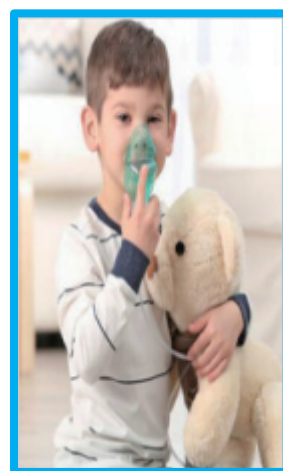

Drink

Drop

Spray

Nebulize

How to Make Colloidal Silver

With the Spooky2 Rife machine, the special colloidal silver add-on device and the Spooky2 program; anyone can make true commercial grade colloidal silver that is on par with the best commercial grade colloidal silver available right in the privacy of our own home.

To make truly the best highest quality colloidal silver, the process takes a long period of time. Other home generators which make colloidal silver in a few short hours do not compare in quality, particle size or efficacy.

The specified waveform and the reversing of polarity automatically cleans the silver rods. The largest particles fall to the bottom and the end result is the best quality colloidal silver. NOTHING sold to a home user is even close to the quality of the Spooky2 generated colloidal silver.

Follow these simple steps to create true colloidal silver with a high silver content. The silver particle size will be very small. This increases effectiveness.

Step 1: Preparation

The Spooky2 Colloidal Silver Kit Includes:

Spooky2-XM Generator x1

(including power adapter, USB cable and BNC/alligator cable)

Spooky Boost v3.1 x1

Spooky Silver Rod x2

Magnetic Stirrer x1

User to provide:

Glass or Ceramic Container x1

Distilled Water Only

Step 2: Washing

Thoroughly clean the Spooky silver rods and container. Rinse with distilled water and dry with a napkin.

Step 3: Connection

1. Fill the container with distilled water. Do not use tap or filtered water. These will almost certainly contain unwanted impurities and chemicals.

2. Place two clean and shiny silver rods in the water. Ensure the distance between the rods is maintained at one inch or greater.

3. Place the container on the magnetic stirrer and insert the little plastic agitator.

4. Clip the alligator clamps onto the silver rods and plug the other end of the cable to the Spooky Boost v3.1 attachment.

5. Connect the generator to your computer's USB port and plug in the power adapter.

Step 4: Settings

1. Turn on the Spooky2-XM generator and start the Spooky2 software.

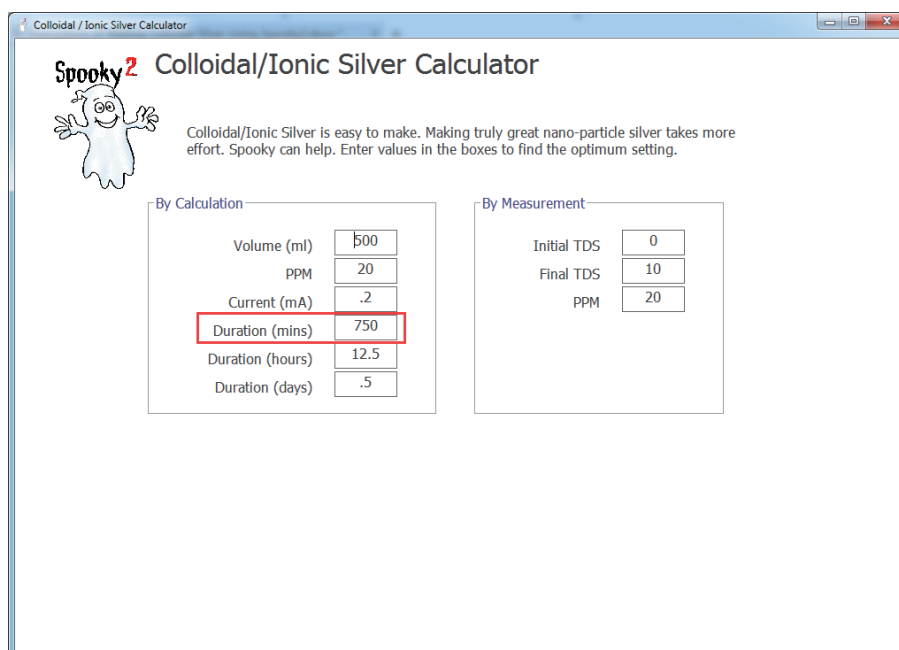

2. Click Utils from the top menu. Choose Colloidal/ Ionic Silver Calculator. Here you enter the parameters to calculate how long to run your colloidal silver generation system.

3. Use the "By Calculation" method to calculate the program duration. You may change any field in the calculator.

Enter the distilled water volume. For example 500ml.

Enter PPM. This is the desired Parts Per Million. We suggest setting this to 20PPM. This is the strength of most commercial colloidal silver.

The total time needed to make your CS will be shown automatically beside Duration. This duration is given in minutes, hours and days. Take a note of the duration in minutes. You will need this later.

The screenshot shows a software window titled "Colloidal / Ionic Silver Calculator" with a cartoon ghost icon labeled "Spooky2". Below the title bar, there is a text box that reads: "Colloidal/Ionic Silver is easy to make. Making truly great nano-particle silver takes more effort. Spooky can help. Enter values in the boxes to find the optimum setting."

The interface is divided into two main sections: "By Calculation" and "By Measurement".

By Calculation:

Volume (ml)	500
PPM	20
Current (mA)	.2
Duration (mins)	750
Duration (hours)	12.5
Duration (days)	.5

By Measurement:

Initial TDS	0
Final TDS	10
PPM	20

4. Exit the calculator, and go to Preset tab, then open Miscellaneous directory, choose Colloidal Silver Generation - JW Preset.

5. Go to Programs tab, enter the calculated duration (minutes) from step 3 into the Dwell Multiplier field.

6. Go to Control tab, tick allow generator overwrites, select a generator and run the program.

7. Turn on the magnetic stirrer. Adjust for gentle movement of water. The speed is not critical.

It is a good idea to cover your container with a lid or plastic food wrap. This ensures airborne dust particles do not settle into the water, causing it to change color.

Do not rush the manufacturing process. Slower is better.

Important Notes

1. The quality of CS will increase if it is made slowly. It can take a long time to make a truly great batch.
2. Use cold water. Hot water will speed up the process but the particle size will increase.

Testing

You can shine a laser light in the solution and see a visible red line, indicating microscopic silver particles in suspension and the process is then complete.

Storing

Store the CS solution in a dark glass container. You can use an amber beer bottle, which is cheap and works great. Plastics and ultra violet light from the sun may cause the silver ions to lose their positive charge and clump together, losing their ability to heal. Therefore, do not store your colloidal silver in plastic or clear glass.

The Color of Colloidal Silver

The main parameters contributing to the color of colloidal silver is the particle size, concentration and light absorption. The color of colloidal silver will be darker with larger particle size and more concentration.

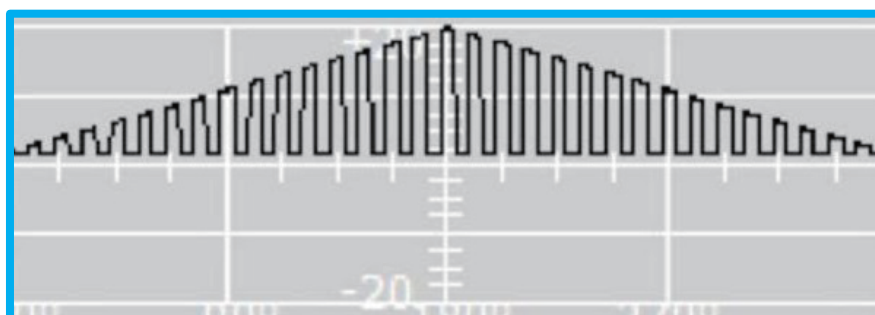

Concentration and size both affect

the color colloidal silver should have.

Why Spooky2

There are three unique features that help Spooky2 produce remarkably high-quality colloidal silver.

User Feedback

Some fibers were in bits and pieces as if the silver broke them up !

A drop of the Colloidal Silver which I made with Spooky2 was put on top of a Morgellons lesion plaque which had only one visible fiber. The Colloidal Silver pulled out a whole lot of fibers, some were in bits and pieces as if the silver broke them up. This is awesome.

Pain Almost Banished with Colloidal Silver

I had a very uncomfortable pain in my side which has lasted for quite awhile (couple of weeks). At times it was difficult to stand up from a chair. It was from having too much apple juice. I was doing a gall bladder flush and decided to use the version that you take one liter of AJ per day. I knew this was a not so great idea, but did it anyways and I got a major pain in my side. Feels like at the junction of the transverse and descending colon.

Anyways in desperation I decided to try Colloidal Silver and bingo it worked. I probably had 6 ounces in the AM and about the same in the afternoon. The pain is not totally gone but pretty close to it. I was surprised and figured I would get indigestion from it, but none.

I wanted to report it before it about it.

Thanks John and the team !!!!!!!!!

Colloidal Silver for Dog

My dog tore his cornea and it caused an infection to set in which if not taken care of immediately a dog will usually loose his eye.

The vet prescribed an antibiotic gel to apply 3x a day, but it was not working. I started putting colloidal silver in his eye 2x a day. He did not like the treatment. With the vet gel, he tried to run away. With the Colloidal Silver, it brought him soothing relief.

I also have been running Spooky2 frequencies non-stop on him. It has been over a week, it is now better!!! Still needs CS and frequencies. I do still put the eye salve in his eye 1x a day (vet said 3x). Thankful for my Spooky2. Thankful that I do not plan to go back to the vet for more eye gel. A similar incident years ago cost us approx. 3 months of vet care and many rounds of the eye salve. We saved so much money!!! The rest of the recovery will be with Spooky2 frequencies and Spooky2 Colloidal Silver !!!

Conjunctivitis Success by Spraying Colloidal Silver

I received a call from my wife that that my daughter needed to be set up on frequencies for a sore throat. They were at a water park the day before. By the time I got home from work her eye was oozing green pretty bad. I sprayed her eyes and throat with colloidal silver made with spooky. The results were almost immediate. Sprayed twice before bed. In the morning only one eye had issues and the sore throat was gone. Sprayed every two hours about three additional times. All symptoms were gone by early afternoon even eye redness. I did run the blood cleanser program with the cold laser once, which may have also helped. Stopped that problem in its tracks quick!

Animal Frequencies

We treated our cat with colloidal silver. Rinsed her eyes three times per day. After a few rinses she understood that it helped her, and patiently laid there while I rinsed her eyes with a dropper and gently moving the eyelids back. We also gave her CS in the drinking water. I tried running the plasma for it but I did not hit the right frequency. Since the CS was so effective I skipped the plasma altogether. Took about ten days for the eyes to clear, and we kept on for another week just to make sure.

If you can get a sample of liquid from the eyes, you could try putting the sample in the remote with a dog hair and run general healing frequencies on it. For example, immune system stimulation. Should be the same as Hulda Clark's plate zapping. Works really well.
